

Contents of the “**report-scripts-commands**” Directory

1. **Hmm-kunitz-detector-report-sareh-salehi.pdf**: Project report (without code). For detailed scripts used in the report, refer to the file below.
2. **Hmm-kunitz-detector-with-codes-description(Google Docs format)**: Complete project report including codes and commands used, step-by-step with technical explanations, also some comments are written for better understanding.
3. **project-steps-diagram.png / project-steps-diagram.pdf**: Visual diagrams of the full workflow. Each step shows input and output file names in a simple, structured format.
4. **Steps-codes-commands.pdf**: Contains the commands used at each project step (without any extra explanations). This file directly corresponds to the steps illustrated in the diagrams listed in item #3.
5. **performance.py** and **get_seq.py**: Python scripts used throughout the project workflow.
6. **commands.txt** and **commands_1.txt**: Shell history files (exported from the WSL environment). Included for documentation and traceability purposes.

 **Files in other directories** contain input, output, or intermediate data associated with specific steps of the project workflow. Their contents align with the directory names and are organized accordingly.
